

Paper's Complex Manufacturing Journey

How North American Tariffs Impact the U.S. Forest Products Industry

The U.S. forest products industry **relies on open access** to key international markets, including **Canada** and **Mexico**, for exports and imports of essential forest products and raw materials. AF&PA supports free and fair trade and the elimination of foreign trade barriers.

The U.S. forest products supply chain is complex and highly integrated with **Canada** and **Mexico**.

This trade helps support:

People working in the U.S. forest products industry, particularly in rural America

1.63 million

Additional jobs across our industry's value chain and in local communities

Our industry's manufacturing process involves **many stages** that can each happen at different facilities on **both sides of our borders**.

Our products often cross the Canadian border multiple times.

Certain raw material inputs must be sourced from **Canada** due to specific fiber quality demands and transportation efficiencies. We also rely on **Canada** for energy, chemicals and other materials vital to the manufacturing process.

Pulp and paper mills are strategically located across the United States

We have numerous facilities in key states like Idaho, Maine, Michigan, Minnesota, New York, Ohio, Washington, and Wisconsin.

These capital intensive facilities have been built and refined with the customer in mind around existing mill infrastructure for decades. It is not economically or logistically viable for these facilities to source their many inputs from a different region.
